SUMMARY

14-year career as Business Analyst and Data Analyst with domain knowledge on digital supply chain transformation. I specialize in turning complex business requirements into working digital solutions, from requirement gathering, designing operating model and user acceptance test, maintain data pipelines and dashboard. Key achievements include SAP implementation for new Distribution Centre in Singapore to simplify €160M spend of electronics supply chain flow, implementation vendor forecast apps resulted to 30% improvement in forecast accuracy, implementation of procure to pay apps using SupplyOn to gain 25% productivity accross 150 factories.

SKILLS

Business Analysis: BPMN, UML, Business Requirement Document, Acceptance Criteria, Change Management, Critical Thinking, Problem Solving
Data Analysis: SQL (SQL Server, MySQL, Redshift, PostgreSQL), Python (pandas, numpy, matplotlib, scikit learn), Visualization (Excel, Tableau, Power BI), ETL (Databricks, Pyspark)
ERP: SAP (SD, MM, FI, WM), Oracle, EDI (ORDERS, ORDCHG, ORDRSP, DESADV, INVOIC, DELFOR, INVRPT), SupplyOn, Kinaxis, Coupa
Supply Chain Management: Vendor forecast management, MRP, Order to Cash, Procure to Pay, Warehouse Management, Master Data Management

WORK EXPERIENCE

Business Process Referent – Procurement Hub	May 2022 – May 2026
Schneider Electric Batam, Indonesia	
- Analyzed 300k+ records of electronics component data using Tableau to define scope, baseline and metrics implementation of new DC in Singapore. - Collaborated with different stakeholder (finance, supply chain planning, procurement, tax, custom, IT, external partner) to design BPMN of new DC in Singapore, using SAP Signavio for the targeted operating models - Dropshipment, Cross-docking, Centralized Stock, and Subcontracting. - Translated complex business requirements into SAP functional specifications including the setup of legal entity structure and configuration for SD, PP, MM, FICO, and WM modules. - Developed and execute UAT scenario to ensure SAP configuration for all modules meet the specifications of 4 operating models. - Led the integration of SAP in DC with Schneider’s digital tool suite, such as Oneshuttle for master data management, SupplyOn for P2P processes, Kinaxis for SIOP planning, OneMM for Inventory management, PRISM for Purchasing Analytics, OPM for O2C processes, to ensure supply chain end-to-end visibility and operational alignment. - Led the implementation of 5 EDI messages (ORDERS, ORDRSP, ORDCHG, DESADV, INVOIC) with 30+ external vendor and 9 inside group customers, ensuring synchronized data flow across the supply chain ecosystem. - Led the implementation of DHL integration with Manhattan system to ensure automated data flows for smooth operations of warehouse. - Collaborated with digital team to deliver and prioritize 100+ backlog requirements and 600+ incidents through SAP Solution Manager, Jira, and ServiceNow. - Developed and maintained automated ETL pipelines using Databricks (Python, PySpark, SQL, AWS Redshift) to manage 10 millions+ records of supply chain data (forecast, sales, inventory, requisitions, purchase order, master data), resulted into 40% efficiency on providing regular data analysis. - Developed and maintained Tableau dashboards of DC control tower to monitor scalling progress, detect master data and transaction errors, preventing supply disruptions and gaining 20% efficiency in the operations. - Led the implementation of RPA to automate component supply shipment to EMS, resulted into 30% productivity. - Develop playbook and training material to run the operations as well as conduct the training to flow controller. - Develop Tableau dashboard to perform automated sanity check and ensure the quality of master data before uploading into SAP, gaining 12% efficiency on master data processing in SAP. - Successfully migrated 10,000+ components, 30 external vendors, and inside group customers into DC covering 96% targeted spend. - Led the implementation of DELFOR EDI message with 2 external vendors as part of VMI (Vendor Managed Inventory) and Consignment program at DC, to reduce the inventory and shorten the lead time by half. - Piloted forecast stabilization process using AI/ML with 2 external vendors and 10 components, to improve forecast accuracy and reduce bullwhip at DC.	

Application Lifecycle Manager – Schneider Supplier Portal SCM	Jan 2020 – Apr 2022
Schneider Electric Batam, Indonesia	
- Led a team of 5 to manage the application lifecycle and user adoption across 170 factories and 5,000+ vendors globally, with result of 82% spend coverage on deployment. - Animate BPO, application analyst and deployment leader to drive application development and deployment. - Conducted a detailed gap analysis between the legacy and new systems; collaborated with Business Process Owners (BPOs) to define the strategy and timeline for decommissioning the old platform. - Collaborated with Digital teams to ensure Capex and Opex for the platform stays within allocated budget. - Established a governance framework using ServiceNow and JIRA, achieving high SLA compliance for an average of 80+ global tickets per month. - Collaborated with digital team to deliver and prioritize 20+ backlog requirements and 60+ incidents per month. - Managed the overall performance of the legacy platform, ensuring 100% consistency data refreshes and system stability for global users. - Designed and implemented business partners onboarding workflow for the new platform, including technical IT setup and EDI (Electronic Data Interchange) integration specifications.	

Business and System Analyst – Schneider Supplier Portal	May 2013 – Dec 2019
Schneider Electric Batam, Indonesia	
- Led the development lifecycle of Schneider Supplier Portal for vendor forecast, procure to pay, and inventory management modules. This included writing Business Requirement Documents (BRD), managing UAT, and backlog tracking in collaboration with vendors like Cognizant and SupplyOn. - Managed the deployment of SSP to factories and vendors worldwide, with result of 82% spend coverage on deployment, 170+ factories and 5000+ vendors. - Developed all training materials (videos and guides) and conducted Train-the-Trainer sessions to ensure smooth adoption. - Translated change requests into functional specs and be level 2 support on technical issues via ServiceNow to ensure system stability and continuous improvement. - Digitized the forecasting process for 170+ factories, improving accuracy by 30% within 4 years through root-cause analysis and stakeholder coaching. - Designed and launched standardized VMI and Consignment modules, to support OptiFlow program contributed to a €12M reduction in inventory within two years. - Developed a dedicated module to synchronize vendor-plant lead times, resulting in an 18% improvement in data accuracy within one year. - Integrated the procure to pay process via IDOC for 20 ERPs and 140+ factories, achieving a 25% increase in procurement productivity over three years. - Developed and maintain KPI dashbord to monitor forecast accuracy of 170+ factories and 8 regions. - Transitioned reporting from manual Excel files to automated Tableau dashboards. Wrote SQL queries to pull data directly from the database, making KPIs transparent and accessible for all users. - Developed and maintain Tableau dashboards to provide monthly reporting on deployment of procure to pay implementation. - Developed and maintain Tableau dashboards to provide visibility on value creation of each modules.	

Graduate Trainee Engineer	May 2012 – Apr 2013
Schneider Electric East Asia Japan Supply Chain Batam and Cikarang, Indonesia	
- Completed a 1-year management trainee program involving cross-functional rotations across four manufacturing plants in Batam and Cikarang to gain a holistic understanding of industrial operations. - Optimized production lines by identifying operational waste and implementing Statistical Process Control (SPC) to monitor process stability and enhance quality standards. - Evaluated production machinery and proposed engineering modifications that optimized cycle times and achieve cost savings. - Gained end-to-end exposure to the industrial project sequence, including tendering, design engineering, supply chain, procurement, testing, and shipping. - Supported internal process audits following Schneider Process Systems for the PCBA department and standardized labeling systems to ensure compliance and organizational accuracy on the shop floor.	

EDUCATION

Bachelor’s Degree of Electrical Engineering - Computer Engineering and Information Technology	Aug 2007 – Jan 2012
Brawijaya University – Malang, Indonesia	
GPA 3.33/4.00	

COURSE & CERTIFICATION

- Certified Business Analysis Professional (CBAP)** | Starweaver | 2026
- Google Project Management** | Google | 2025
- Tableau Business Intelligence Analyst** | Tableau Learning Partner | 2025
- Electrifier Level 1 – Business Intelligence** | Schneider Electric | 2024
- SAP Professional Fundamentals** | SAP | 2024
- Edison Expert Level 1 – Data Analytics** | Schneider Electric | 2021
